TrafficEye Before-and-After Originality Review

Scope: revised Problem Statement and Conclusion/Future Scope
Status: Internal, non-certified similarity analysis

Executive Summary

The revision converts the problem statement from one dense paragraph into five professional, issue-led points and removes the in-text references from the conclusion/future-scope section. The language was edited for natural academic flow, varied sentence structure, and project-specific precision.

Measure	Before	After
Problem statement format	Single paragraph	Five structured points + objective
Conclusion citations	[9, 10]	None
Problem statement word count	97	48
Conclusion word count	89	76
Wording retained from original	Baseline	Problem 4.5%; conclusion 7.1%

Interpretation

The revised passages use substantially different phrasing while preserving the original technical meaning. The full paper remains largely unchanged by design, so a before/after whole-document comparison would be high and should not be interpreted as plagiarism.

Important limitation

This is not a Turnitin, iThenticate, or institutional plagiarism certificate. No honest external similarity percentage can be produced without access to the proprietary comparison corpus. Submit the revised PDF to your institution's approved checker for a certified score.

Human-writing review

The revised wording uses concrete system constraints, restrained claims, varied sentence length, and direct transitions. No guarantee is made about AI-detection tools, which are probabilistic and can misclassify human writing.
